

We are proud to offer ^{GREEN} Package Design
Using environmentally safe materials and printing

Our designers can create a custom designed package especially for your product using recycled materials. We will build a package structure and a graphic design that will encourage customers to make a purchase.

The design can then be printed using inks that are safe for the environment. We offer many different materials for you to choose from. Cardboard and corrugated that is 100% recycled and can be printed on directly. Or, line them with the many fine papers that are friendly to the environment.

And, if you prefer, we can provide you with the structural design and a die drawing so you can apply your own art. Either way we can provide you with samples and mock-ups before production. You will get the package your product deserves.
